PERMOS Partners

The measurements, site maintenance, and data processing for the permafrost monitoring network are carried out by six partner institutes (in alphabetical order):

- Institute for Geotechnical Engineering, ETH Zurich (**IGT-ETH**)
Contact: [Prof. Dr. Daniel Farinotti](#)
- Department of Geosciences, Geography Institute, University of Fribourg (**IGUF**)
Contact: [Prof. Dr. Reynald Delaloye](#), [Prof. Dr. Christian Hauck](#), [Prof. Dr. Martin Hözle](#), [Dr. Cécile Pellet](#)
- Institute of Earth Surface Dynamics, University of Lausanne (**IDYST**)
Contact: [Dr. Christophe Lambiel](#)
- Institute of Earth Sciences, University of Applied Sciences and Arts of Southern Switzerland (**SUPSI**)
Contact: [Dr. Cristian Scapozza](#)
- Department of Geography, University of Zurich (**GIUZ**)
Contact: [Prof. Dr. Andreas Vieli](#), [Dr. Isabelle Gärtner-Roer](#), [Dr. Tobias Bolch](#)
- WSL Institute for Snow and Avalanche Research Davos (**SLF**)
Contact: [Dr. Marcia Phillips](#), [Dr. Jeannette Nötzli](#)

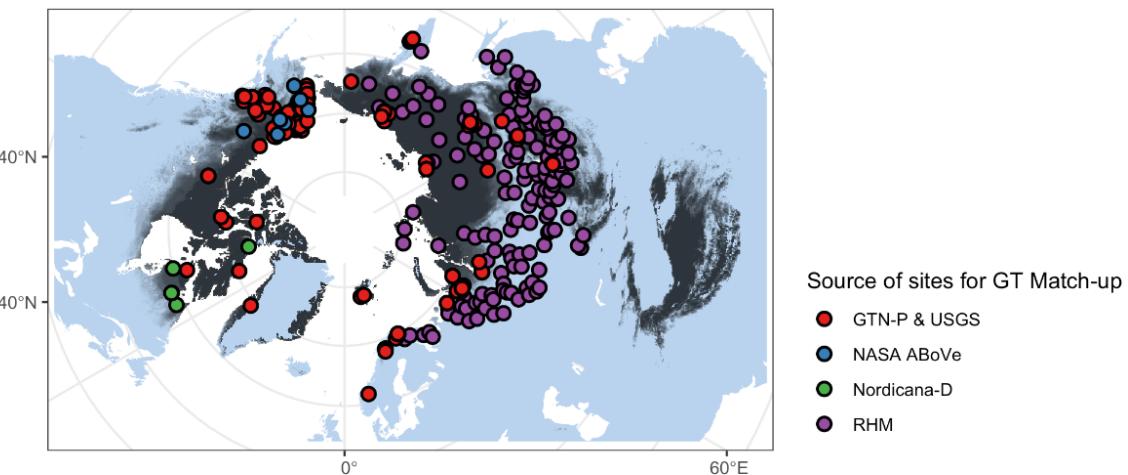

Permafrost_cci validation data

climate change initiative
→ PERMAFROST

- Mean Annual Ground Temperature MAGT per Depth (GTD)
- annual Permafrost FRaction PFR derived from GTD
- annual Active Layer Thickness (ALT)

in situ MAGT:

at depths [m] : 0, 0.25, 0.5, 0.75, 1, 1.5, 2, 2.5, 3, 3.5, 4, 4.5, 5, 10, 20

Permafrost_cci MAGT:

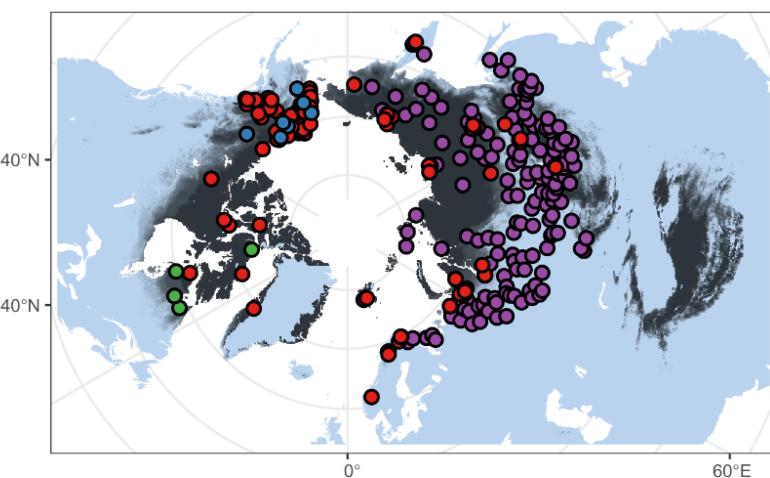

- raster product
- at depths [m]: 0, 1, 2, 5, 10
- interpolated

Permafrost_cci validation data

climate change initiative
→ PERMAFROST

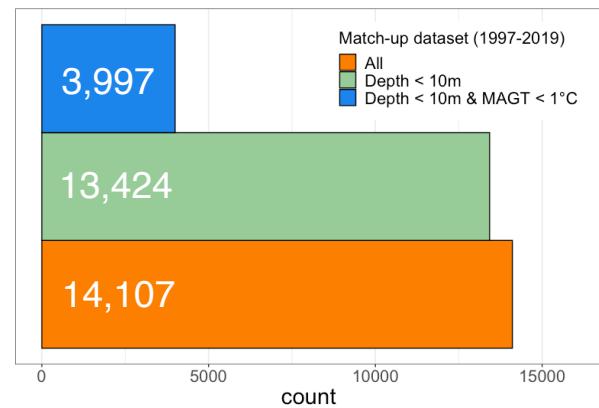

- Mean Annual Ground Temperature MAGT per Depth (GTD)
- annual Permafrost FRaction PFR derived from GTD
- annual Active Layer Thickness (ALT)

Corrected MAGT Match-up dataset:
Artefacts, inaccurate coordinates, landscape anomalies

Source of sites for GT Match-up

- GTN-P & USGS
- NASA ABoVe
- Nordicana-D
- RHM

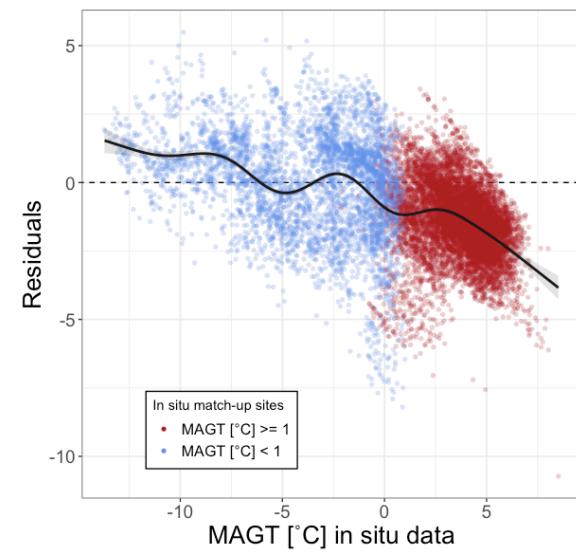

Permafrost_cci validation results

climate change initiative
→ PERMAFROST

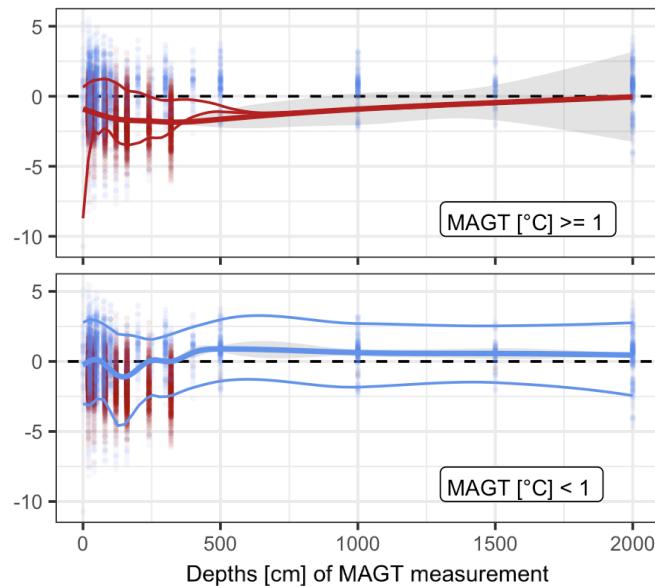

- Mean Annual Ground Temperature MAGT per Depth (GTD)
- annual Permafrost FRaction PFR derived from GTD
- annual Active Layer Thickness (ALT)

95% 1.82°C
Median -1.12°C
5% -3.53°C

95% 2.81°C
Median 0.20°C
5% -3.14°C

95% 0.71°C
Median -1.46°C
5% -3.62°C

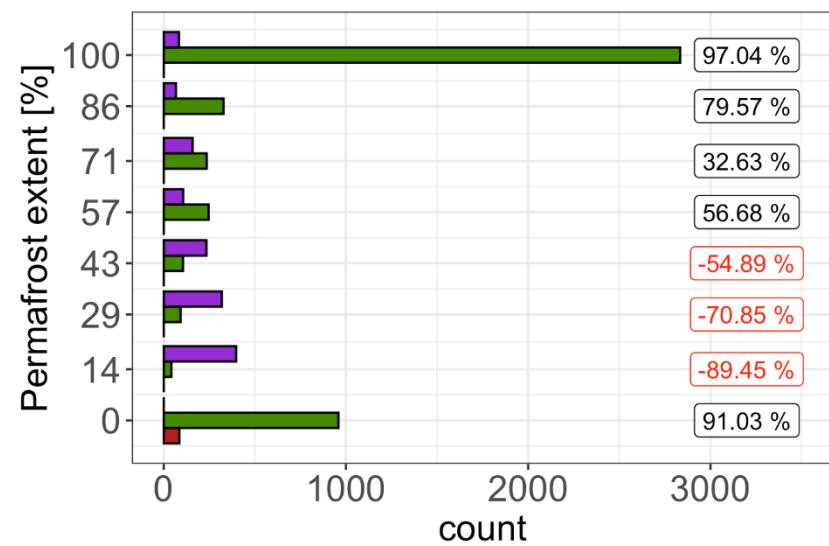

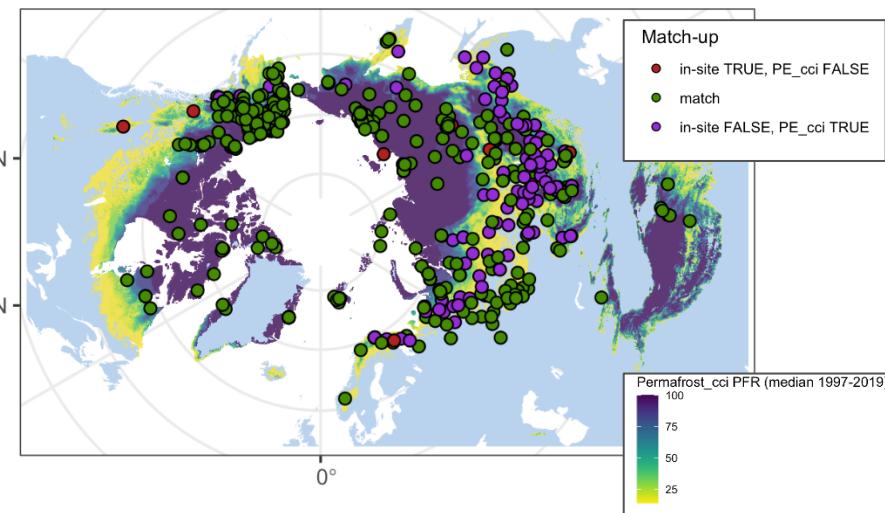

Permafrost_cci validation results

climate change initiative
→ PERMAFROST

- Mean Annual Ground Temperature MAGT per Depth (GTD)
- annual Permafrost FRaction PFR derived from GTD
- annual Active Layer Thickness (ALT)

Permafrost == TRUE: In situ MAGT ($<0.5^{\circ}\text{C}$) | ALT

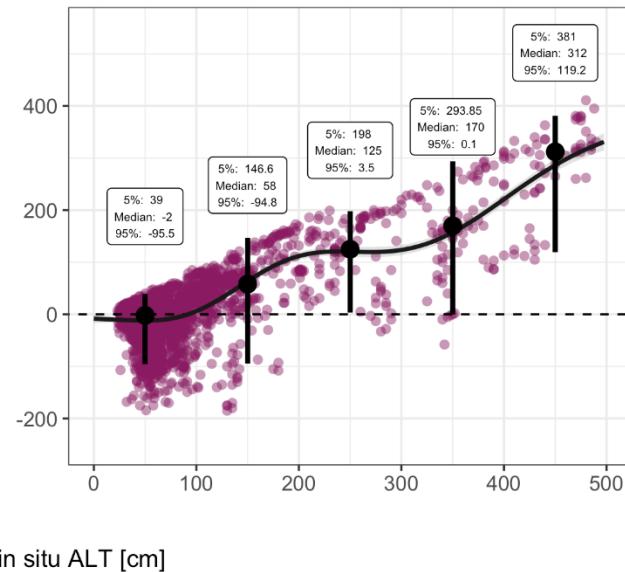

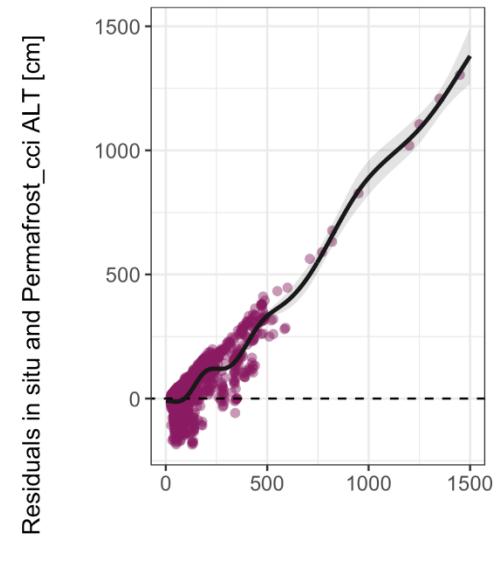

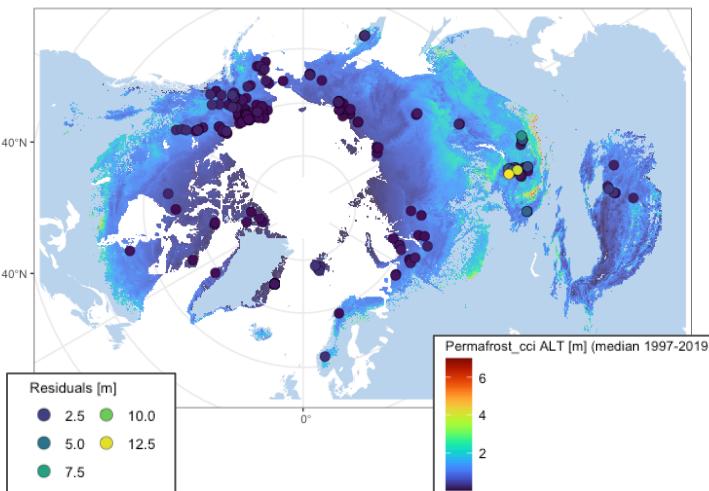

Permafrost_cci validation results

climate change initiative
→ PERMAFROST

- Mean Annual Ground Temperature MAGT per Depth (GTD)
- annual Permafrost FRaction PFR derived from GTD
- annual Active Layer Thickness (ALT)

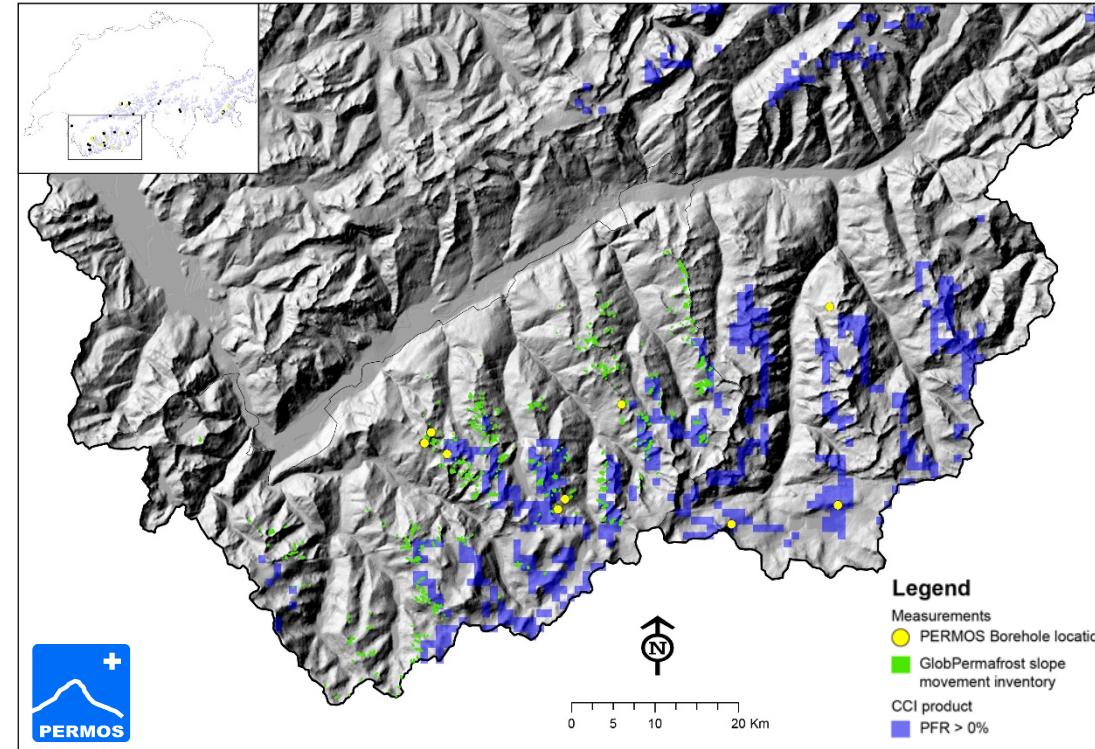

Permafrost_cci validation results

GTD and PFR validation results:

- warm GTD_cci bias
- PFR_cci permafrost limit down to 3000 m is underestimated:
in situ mountain permafrost limit occurs at 2600 m;
- majority of GlobPermafrost slope movement products outside of Permafrost PFR_cci

Permafrost_cci PFR compared to GlobPermafrost SAR-derived slope movement inventory and **PERMOS** permafrost monitoring borehole locations

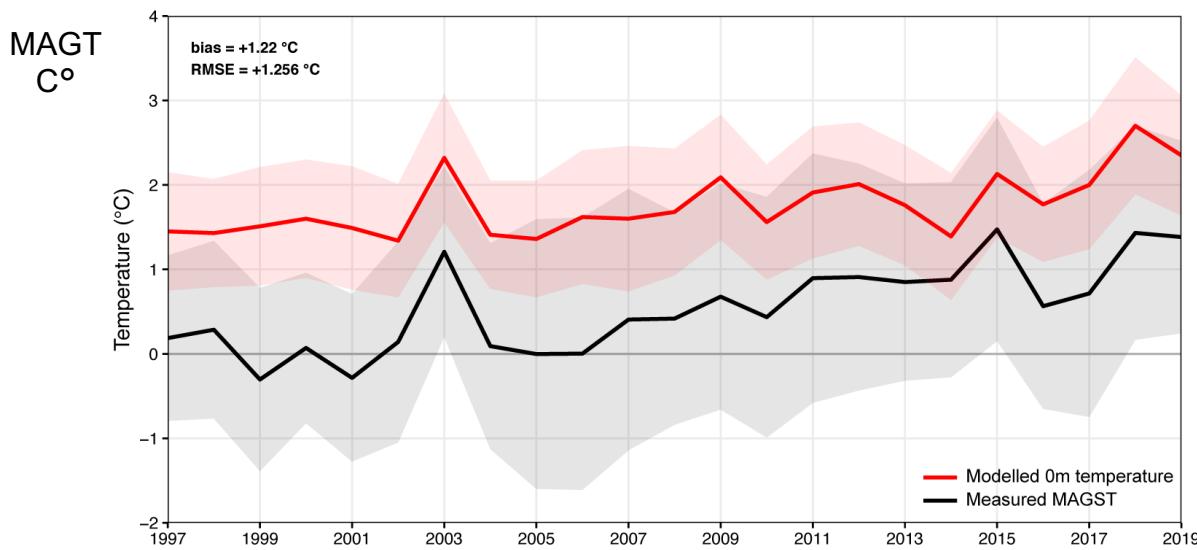

Permafrost_cci validation results

climate change initiative

→ PERMAFROST

Permafrost_cci GTD warm bias year
GTD dynamics captured

Permafrost_cci MAGST (0m)
vs. PERMOS in situ MAGST
averaged entire Swiss Alps
between 2500-3000 m
